

AD FOR System/Network/Database Administrator

eJournalPress is a Rockville-based company, which provides software to scholarly publications. The work environment is friendly, casual, and always exciting. This position is for a System/Network/Database Administrator. Based on past experience, this is a low stress job entailing capacity planning, ordering/installing equipment, and troubleshooting performance or system availability issues. The ideal candidate would be knowledgeable in two or three of these areas:

- 1) System Administration – be able to install, configure, and maintain Windows 2003 file servers and Linux/Apache web servers; knowledge of Apache and PERL/CGI scripts.
- 2) Network Administration – be able to configure and maintain firewalls, load balancers, DNS, etc.
- 3) Database Administration – knowledge of SQL, Microsoft SQL Server, and be able to craft backup/restore/replication scripts and/or troubleshoot database performance and outage issues

In summary, we are looking for a System/Network Administrator who can also double as a DBA or visa-versa. Experience with PERL and SQL is desirable.

Position Requirements:

- Individual should be self-motivated, comfortable with challenging assignments, and able to multi-task
- Good written and oral communication skills

Desired:

- 6+ years experience with Linux / Apache
- 6+ years experience with network components
- 6+ years experience with MS SQL and PERL

Knowledge of Apache, JavaScript, CSS, DHTML preferred.
Ability to learn new software as necessary.

Qualifications: SQL and PERL
